EDUCATION

Purdue University, West Lafayette, IN **December 2026**
B.S. in Computer Science & Artificial Intelligence (Double Major) **GPA: 3.8, Dean's List**

Certifications: Generative AI for Software Development from DeepLearning.AI, AWS SageMaker, Azure AI Fundamentals.

Skills: Python, Java, AWS, Azure, Jira, Docker, Kubernetes, Apache Kafka, Spark, Machine Learning Infrastructure, Data Analysis, Pytorch, TensorFlow, RAG, SQL, Jira, Git, CUDA, RESTful API, JavaScript, LangChain, scikit-learn, LLMs.

PROFESSIONAL EXPERIENCE

AWS & Purdue University (SPS) – Student Space-Tech Organization **Spring 2026**
AI Curriculum & Infrastructure Lead
- Architected an AI & Edge Computing certification in partnership with an **AWS Co-Founder**, bridging the gap between high-performance cloud training on AWS SageMaker/S3 and real-time inference on hardware-constrained processors.
- Designed modules for scalable ML infrastructure to manage the lifecycle of models from cloud-based development to edge deployment, integrating automated data pipelines to ensure reliability in real-time environments.

Lockheed Martin – World's Largest Defense and Aerospace Technology Firm **Summer 2025**
Software Engineer Intern
- Co-developed a large-scale defense-grade prototype of a shoulder-launched, AI-driven target tracker in under 8 weeks.
- Engineered a high-performance data processing pipeline in Python and Apache Spark with real-time streaming, integrating ML inference modules and stochastic processes for accurate detection under constrained runtime.
- Implemented a feature-based algorithm to detect small targets (≤ 2 km) and pipelined its outputs to a multi-object tracker over Apache Kafka and querying with SQL (kSQL), cutting missed detections by 25%.
- Supported end-to-end ML infrastructure on AWS SageMaker, training and validating on real-world flight datasets, and automating testing to cut testing from 4 days to 3 hours, utilizing Gitlab CI/CD pipelines.

Textron Systems – Top Defense and Aerospace Technology Firm **Summer 2024**
Software Engineer Intern
- Architected scalable software design for a hovercraft training simulator for the U.S. Navy, utilizing Docker and Kubernetes for container orchestration, and collaborated with engineering teams in Agile workflows.
- Developed ML-based threat detection algorithms utilizing casual inference and unsupervised learning methods. Resolved critical bugs in a Warfare Simulator, leveraging TensorFlow, PyTorch, and MySQL, reduced false positive alerts by 35%.
- Single-handedly built and deployed an AI-powered NLP tool to automate PDF-to-Excel data extraction, saving 100+ hours monthly and becoming a key company asset.

RESEARCH EXPERIENCE

John Deere – Ag-Tech Manufacturing Leader **Fall 2023 – Spring 2024**
ML Research Engineer Intern
- Implemented a Parts Demand Forecasting Tool leveraging Python, Pytorch, time series forecasting and machine learning models such as linear regression to predict inventory demand across locations, resulting in a 15% cut in excess inventory.
- Researched supply chain optimization, predictive analysis, recommender systems, and data cleansing.

SOFTWARE ENGINEERING ACTIVITIES

Investment Strategy SLM Assistant – SLM Chatbot **Spring 2025 – Current**
- Built a domain-specific small language model (SLM) using a Kaggle dataset and gathered investment strategies to power a chatbot answering complex finance queries through supervised fine-tuning on Hugging Face datasets.
- Designed a custom pipeline for tokenization, embedding, and training with PyTorch-based transformers, on Microsoft Azure GPU infrastructure; implemented RAG and evaluated performance using perplexity, BLEU, and retrieval accuracy.

PaySplit App – Shared Expense Tracking App; *Full-Stack Developer* **Spring 2024 – Current**
- Built a React Native iOS/Android app to streamline college expense tracking among peers, backed by secure RESTful APIs with Firebase Authentication for real-time data sync, utilizing Kotlin/Java, Swift, AngularJS, and NodeJS.
- Built AI-powered receipt parsing & insights pipeline leveraging Hugging Face NER models, LangChain orchestration, and supporting ONNX/scikit-learn components for scalable robustness.
