EDUCATION

Purdue University, West Lafayette, IN

December 2026

B.S. in Computer Science & Artificial Intelligence (Double Major)

GPA: 3.8, Dean's List

Certifications: AWS Machine Learning Engineer (2026), Microsoft Azure AI Apps and Agents Developer (2025)

Skills: Python, Java, C++, JavaScript, TypeScript, AWS, Azure, Red-Teaming, Docker, Kubernetes, Apache Kafka, Spark, Machine Learning Infrastructure, PyTorch, TensorFlow, RAG, LLMs (Bedrock), Agentic Orchestration, ReAct, SQL, Git, Jira.

PROFESSIONAL EXPERIENCE

Amazon Web Services (AWS)

Summer 2026

Software Development Engineer Intern

- Shipped a multi-agent AI Security Analyzer using AWS Bedrock (AgentCore) and Anthropic models, automating vulnerability detection across complex codebases and IaC, reducing security review time by ~8 hours/deployment.
- Integrated adversarial red-teaming agents to cross-validate LLM findings, uncovering Sev-1 vulnerabilities in core infrastructure and reducing false-positive IAM alerts by over 40% through deterministic evaluation tools.
- Built an orchestration layer developed for parallelized analysis, utilizing AWS Fargate, API Gateway, AWS CDK, and DynamoDB to manage stateful, multi-step security workflows at enterprise scale with low latency.
- Engineered a closed-loop remediation pipeline integrating ReAct-based reasoning with an automated PR/ticketing system; implemented an agent evaluation framework with a 90% Precision/Recall threshold to gate production-ready findings.

Lockheed Martin

Summer 2025

Software Engineer Intern

- Architected a scalable ML-inference platform for an AI-driven missile prototype, automating validation pipelines and optimizing backend microservices to reduce latency in defense-grade applications.
- Designed a data processing pipeline in Python and Spark for real-time streaming, integrating ML inference modules to detect distant small targets and feed a multi-object tracker over Kafka and SQL, cutting missed detections by 25%.
- Engineered end-to-end ML training infrastructure on Azure Machine Learning using GitLab CI/CD pipelines, augmenting real-world flight datasets via synthetic data generation; automated validation to cut testing cycles from 4 days to 3 hours.

Textron Systems

Summer 2024

Software Engineer Intern

- Developed ML-based threat detection algorithms using causal inference and unsupervised learning for a Warfare Simulator; leveraged TensorFlow, PyTorch, and MySQL to resolve critical bugs and reduce false positive alerts by 35%.
- Collaborated with cross-functional stakeholders to deploy an AI-powered NLP tool, automating data intake processes to save 100+ hours monthly and establish it as a key company asset.
- Optimized MySQL schemas and indexing to reduce analytical query latency on threat-detection dashboards by 30%.

PROJECTS

AI Code Review CLI Tool – github.com/veerjain-1/ai-code-review-platform

Spring 2026 – Current

- Engineered a language-agnostic AI grading assistant for Purdue CS faculty; built a lightweight CLI using local Git hooks to intercept commits, performing static analysis and AI feedback before code leaves the student environment.
- Reduced grading overhead across 4+ courses by implementing a caching layer (Redis) that stores recurring feedback patterns, ensuring near-instant feedback for students while maintaining high-quality, contextual code reviews.

Agentic CI/CD Orchestrator – github.com/veerjain-1/agentic-cicd-orchestrator

Spring 2025 – Current

- Designed an autonomous CI/CD orchestrator using Java (Spring Boot) and Python-based LangGraph to manage high-frequency code commits; automated multi-stage build workflows and real-time dependency validation, saving ~15 engineering hours/month in grading pipelines.
- Developed an asynchronous backend triggering recursive LLM agents for deep-dive code analysis; utilized message queuing to manage high-volume commits and generate automated, comprehensive PR summaries.
- Built a scalable agent controller that manages stateful workflows across multiple environments; implemented comprehensive observability using Prometheus/Grafana to monitor agent performance, resource consumption, and deployment reliability.
